[Ref. below listed U.S. laws :

Department of Health and Human Services (HHS) adopted regulations on the protection of human research subjects (45 CFR part 46; 46 FR 8366)

Public Law Title 10 United States Code (USC)

Presidential Executive Order D.o.D. implementation policies of Executive Order S-12333 United States Intelligence Activities and D.o.D. Instructions S-3321.1(S) Overt Psychological Operations [...] in Peacetime and in Contingencies Short of Declared War (U) ; and National Security Decision Directive (NSDD) 130 ; U.S. International Information Policy ;

ALL DIRECT THAT :

****** U.S. PSYOP FORCES will not target U.S. Citizens at any time , in any location globally or under any circumstances. ******

SOUTHERN DISTRICT NEW YORK (" SDNY ") FEDERAL COURT

*** NOT YET FILED AND DOCKETED AS OF 24 AUG 2022 (" CLAIM EIGHT ") ORIGINALLY 17.08.2022 ***

1-26. U.S. law and policy, along with international conventions, regulations, and treaties, delineate the boundaries of PSYOP activity. These directives provide the following fundamental and practical guidelines for the conduct of PSYOP. Increasingly, military operations, such as Operation JOINT ENDEAVOR, are often multinational and involve contact with civilians, presenting greater legal and ethical issues with which to deal.

- *U.S. public law.* Title 10, United States Code (USC), Section 167, *Unified Combatant Command for Special Operations Forces*, designates PSYOP as an SO activity or force.
- *Presidential executive order.* DOD implementation policies of Executive Order S-12333, *United States Intelligence Activities*; DOD Instructions S-3321.1, (S) *Overt Psychological Operations Conducted by the Military Services in Peacetime and in Contingencies Short of Declared War* (U); and National Security Decision Directive (NSDD) 130, *U.S. International Information Policy*, direct that U.S. PSYOP forces will not target U.S. citizens at any time, in any location globally, or under any circumstances. However, commanders may use PSYOP forces to provide public information to U.S. audiences during times of disaster or crisis. The precedent for the limited use of PSYOP forces to present public information to a U.S. audience was set during the aftermath of Hurricane Andrew in 1992. Tactical Psychological Operations teams (TPTs) were employed to disseminate information by loudspeaker on locations of relief shelters and facilities. Information support to a noncombatant evacuation operation (NEO) by PSYOP forces to provide evacuation information to U.S. and third-country nationals would also adhere to the order.
- *Geneva and Hague Conventions.* These international conventions preclude the injury of an enemy with actions of bad faith during his adherence to the law of war. PSYOP personnel will ensure that PSYOP activities do not contribute to such actions. PSYOP planners must work closely with the Judge Advocate General (JAG) to ensure that PSYOP support to deception does not violate the fourth Hague Convention that prohibits ruses that constitute "treachery" or "perfidity." Another chief concern of PSYOP is the treatment of enemy prisoners of war (EPWs). It is a violation of the Geneva Convention to publish photographic images of EPWs. PSYOP products must refrain from using images of actual EPWs. PSYOP planners must be prepared to advise commanders on potentially unlawful PSYOP lines of persuasion involving EPWs. Appendix B provides more information on internment/resettlement (I/R) operations.

Such a RESCINDINCE of the PPD-20 _____ regarding Digital Attacks thereby DOES NOT set a Legal Precedent to Violate the Right to Life and Liberty of a Civilian in Daily Life (Plaintiff PEDOTTI) .

In further review , the Chain of Command regarding PSYOP attacks in any Military Circumstance is at the highest level : CJCS of the PENTAGON , further escalates complaint CLAIM EIGHT to an International Military Law and Maritime Charter level at the United Nations and OSCE level in consideration of the Military Campaign between RUSSIAN FEDERATION and UKRAINE

must be followed in U.S. Federal and International Law ;

as well as such applications of New York State Laws in relation to Digital
Privacy and Rights ;

[Listed Below]

In U.S. Military Handbooks covering LEGAL IMPLICATIONS OF MILITARY ACTS :

- *Domestic laws.* Copyright law is an essential concern of PSYOP. No product may contain copyrighted material without consent by the copyright holder. If an image, sound file, logo, or any piece of media is used in a product, all copyright issues must be resolved before production.
- *Fiscal law.* Consumer goods used to transmit a line of persuasion (such as imprinted T-shirts or soccer balls) may present unique fiscal constraints. Procurement of such products on the economy in HNs may not be permitted with funds from some sources. In addition, use of HN assets may require adherence to contractual law that is dramatically different from U.S. law.
- *Communications.* U.S., HN, regional, and international communication agreements and protocols must be adhered to when conducting peacetime PSYOP. Constraints may continue to apply during hostilities. ROE may further constrain broadcasts.

In CONSIDERATION OF SUCH PUBLISHED LAWS BASED UPON TREATY AND INTERNATIONAL
LAW , INCLUDING THOSE IN EFFECT SINCE WORLD WAR II COVERING BASIC HUMAN RIGHTS

REGARDING THE LEGAL IMPLICATIONS OF PPD-20 / D.o.D. :

"There's a large degree of unhappiness in DoD and in Cyber Command with the interagency process and the structure set up by PPD-20 to approve offensive cyber operations," a former U.S. official told Eric. The State Department, this person said, "was successful in blocking or slowing Cyber Command in doing things it wanted to do, even against targets you wouldn't think anyone would have any objection to, like ISIS."

KOCHS AGAINST 'BACKDOORS' — Americans for Prosperity, the political arm of billionaire brothers Charles and David Koch, came out against building "backdoors" in data encryption. In an op-ed, David Barnes, the group's policy manager, calls on Congress to pass the bipartisan Secure Data Act, H.R.5823, which would prohibit federal agencies or courts from forcing tech companies to build backdoors into encrypted devices or services.

An Australian teen who hacked into Apple's internal network got caught with a folder labeled "hacky hack hack."

STARKS, T. , a POLITICO REPORTER

***** MOTION TO CALL A WITNESS *****

WITNESS

Sen. Ted Cruz grilled Zuckerberg on a number of issues related to censorship and political bias.

ZUCKERBERG IN DISCUSSION WITH SENATOR TED CRUZ (TEXAS)

Here is the full transcript :

CRUZ: Thank you, Mr. Chairman. Mr. Zuckerberg, welcome. Thank you for being here. Mr. Zuckerberg, does Facebook consider itself a neutral public forum?

ZUCKERBERG: Senator, we consider ourselves to be a platform for all ideas.

SOUTHERN DISTRICT NEW YORK (" SDNY ") FEDERAL COURT

*** NOT YET FILED AND DOCKETED AS OF 24 AUG 2022 (" CLAIM EIGHT ") ORIGINALLY 17.08.2022 ***

CRUZ: Let me ask the question again. Does Facebook consider itself to be a neutral public forum? And representatives of your company have given conflicting answers on this. Are you a first amendment speaker expressing your views, or are you a neutral public forum allowing everyone to speak?

ZUCKERBERG: Senator, here's how we think about this. I don't believe that — uh — there's certain content that we clearly do not allow — hate speech, terrorist content, nudity, anything that makes people feel unsafe in the community. From that perspective, that's why we generally try to refer to what we do as a platform for all ideas.

CRUZ: Let me try — just 'cause the time is constrained. It's just a simple question. The predicate Section 230 immunity under the CDA is that you are a 'neutral public forum'. Do you consider yourself a 'neutral public forum', or are you engaged in political speech, which is your right under the First Amendment?

ZUCKERBERG: Well, Senator, our goal is certainly not to engage in political speech. I am not familiar with the specific legal language of the law that you speak to, so I would need to follow up with you on that. I am just trying to lay out how broadly I think about this.

CRUZ: Well, Mr. Zuckerberg, I will say that there are a great many Americans who I think are deeply concerned that Facebook and other tech companies are engaged in a pervasive pattern of bias and political censorship. There have been numerous instances with Facebook. In May of 2016, Gizmodo reported that Facebook had purposefully and routinely suppressed conservative stories from Trending News — including stories about CPAC, including stories about Mitt Romney, including stories about the Lois Lerner-IRS scandal, including stories about Glenn Beck. In addition to that, Facebook has initially shut down the Chick-Fil-A Appreciation Day page, has blocked a post of a Fox News reporter, has blocked over two dozen Catholic pages, and most recently, blocked Trump-supporters Diamond and Silk's page with 1.2 million Facebook followers after determining their content and brand were 'unsafe to the community'. To a

SOUTHERN DISTRICT NEW YORK (" SDNY ") FEDERAL COURT

*** NOT YET FILED AND DOCKETED AS OF 24 AUG 2022 (" CLAIM EIGHT ") ORIGINALLY 17.08.2022 ***
great many Americans that appears to be a pervasive pattern of political bias.
Do you agree with that?

ZUCKERBERG: Senator, let me say a few things about this. First, I understand where that concern is coming from because Facebook and the tech industry are located in Silicon Valley, which is an extremely left-leaning place. And this is actually a concern that I have and that I try to route out of the company — is making sure that we don't have any bias in the work that we do. And I think it is a fair concern that people would at least wonder about.

CRUZ: Now, let me ask this question. Are you aware of any ad or page that has been taken down from Planned Parenthood?

ZUCKERBERG: Senator, I am not, but let me just finish —

CRUZ: How about Moveon.org?

ZUCKERBERG: Sorry?

CRUZ: How about Moveon.org?

ZUCKERBERG: I am not specifically aware of those cases.

CRUZ: How about any Democratic candidate for office?

ZUCKERBERG: I am not specifically aware. I mean, I'm not sure.

CRUZ: In your testimony, you say that you have 15 to 20 thousand people working on security and content review. Do you know the political orientation of those 15 to 20 thousand people engaged in content review?

SOUTHERN DISTRICT NEW YORK (" SDNY ") FEDERAL COURT

*** NOT YET FILED AND DOCKETED AS OF 24 AUG 2022 (" CLAIM EIGHT ") ORIGINALLY 17.08.2022 ***
ZUCKERBERG: No, Senator, we do not generally ask people about their political orientation when they are joining the company.

CRUZ: So, as CEO have you ever made hiring or firing decisions based on political positions or what candidates they supported?

ZUCKERBERG: No.

CRUZ: Why was Palmer Luckey fired?

ZUCKERBERG: That is a specific personnel matter that seems like it would be inappropriate to speak to here.

CRUZ: You just made specific representation that you didn't make decisions based on political views, is that accurate?

ZUCKERBERG: I can commit that that was not because of a political view.

CRUZ: Do you know of those 15 to 20 thousand people engaged in content review, how many if any had ever financially supported a Republican candidate for office?

ZUCKERBERG: Senator, I do not know that.

CRUZ: Your testimony says, *'It is not enough that we just connect people. We have to make sure that those connections are positive.'* It says, *'We have to make sure that people aren't using their voice to hurt people or spread misinformation. We have a responsibility not just to make tools, but to make sure that those tools are used for good.'* Mr. Zuckerberg, do you feel it is your responsibility to assess users whether they are good and positive connections, or ones that those 15 to 20 thousand people deem unacceptable or deplorable?

ZUCKERBERG: Senator, are you asking about me, personally?

SOUTHERN DISTRICT NEW YORK (" SDNY ") FEDERAL COURT

*** NOT YET FILED AND DOCKETED AS OF 24 AUG 2022 (" CLAIM EIGHT ") ORIGINALLY 17.08.2022 ***
CRUZ: Facebook.

ZUCKERBERG: Senator, I think that there are a number of things that we all agree are clearly bad – foreign interference in our elections, terrorism, self-harm, those are things –

CRUZ: I'm talking about censorship.

ZUCKERBERG: Oh, well, I think that you would probably agree that we should remove terrorist propaganda from the service. So, that – I agree I think is clearly bad activity that we want to get down. And we're generally proud of how well we do with that. Now, what I can say, and I want to get this in before the end, here, is that I am very committed to making sure that Facebook is a platform for all ideas. That is a very important founding principle of what we do, and we're proud of the discourse and the different ideas that people can share on the service, and that is something that as long as I am running the company I'm going to be committed to making sure is the case.

CRUZ: Thank you.

In unsupervised machine learning, no labels are given to the inputs, leaving the algorithm to identify structure in the inputs, for example, by clustering similar data. In other words, unsupervised learning is based on grouping like things without a preconceived idea of what to expect. In semisupervised learning, the machine-learning algorithm is provided some data that are labeled with answers and other data that are not labeled. The algorithm then uses the labeled data to determine the pattern and apply labels to the remaining data. Semisupervised learning can be useful in circumstances where there are too many data to be labeled. Deep neural networks, a subset of machine-learning algorithms, have been trained to classify images, detect objects, identify people from faces, generate text from speech, translate natural languages, and many other tasks. There is some adaptability of deep neural networks for solving adjacent problems, using a technique known as transfer learning. For example, transfer learning was successfully applied from general image recognition to the specific medical-imaging case of diagnosing diabetic eye disease. By initializing the deep neural network on general image recognition cases, fewer medical-image samples were required for training with performance matching that of human specialists. Such transfer learning may reduce the time and associated cost to apply deep neural networks to adjacent domains.

In terms of benefits, forum participants said AI may (1) improve economic outcomes and increase levels of productivity, (2) improve or augment human decision making, and (3) provide valuable insights into complex and pressing problems. Participants also stressed that there may be benefits related to AI that cannot yet be predicted or may even be hard to imagine. In terms of challenges, the participants highlighted several that will eventually need to be addressed.

Such challenges include

- (1) collecting and sharing the data that are needed to train AI,
- (2) accessing adequate computing resources and requisite human capital,
- (3) ensuring laws and regulations governing AI are adequate and that the use of AI does not infringe on civil liberties, and
- (4) developing an ethical framework to govern the use of AI and ensuring the actions and decisions of AI systems can be adequately explained and accepted by those who interact with such systems. Actions to address these challenges could be taken by government, private industry or other nongovernmental actors, or public-private partnerships.

Improved or augmented human decision making.

AI can be used to gather an enormous amount of data and information from multiple locations, characterize the normal operation of a system, and detect abnormalities, much faster than humans can. According to one forum participant, AI is an appropriate technology for the cybersecurity sector because the cyber systems used to provide security generate a vast amount of data, and AI can be used to help determine what are normal conditions and what is abnormal.

One participant stated specifically that machine learning could be used to help establish a potential consumer's identity, which is required before they can gain access to banking and credit. Establishing identities for this purpose is especially difficult in some parts of the world, though there is now a massive change underway to collect data for the purposes of identification. For example, over a billion people in India have had their biometrics collected and are participating in the economy through biometric identification.

NOTE : PLAINTIFF HAS A BANK ACCOUNT. ANY REPORTS OTHERWISE ARE PSYOP.

For example, according to one forum participant, university researchers in the United States have successfully used AI to harness the power of social networks to more effectively spread information on preventing the transmission of HIV among homeless youth. More specifically, the researchers collaborated with social workers to better understand the real-life networks that have developed among the more than 6,000 homeless youth in Los Angeles. They then used an algorithm to recruit youths to serve as "peer leaders" and receive training on preventing HIV. What they found was that the youths selected by the algorithm were far more likely than the youths who were considered most popular to spread the information they received.

HAVE THE YOUTH BEEN INFORMED AND HOW WERE THEY SELECTED?

WHO ARE THE GUARDIANS AND WHERE ARE THEY TODAY?

This same participant noted that AI could be used to enhance body imaging during surgery and facilitate personalized medical care through genome profiling.

This participant noted that in the United States there are five federal agencies that directly supervise depository institutions, in addition to 50 state regulators and other federal agencies that are involved to

some extent. These institutions are, in turn, oftentimes reluctant to enter new sectors or markets because they do not always have a clear picture of how they will be regulated and by whom.

WHO ARE THE FIVE AGENCIES WITH DEPOSITORY ACCESS AND WHO HAS
PERMISSIONS TO VIEW AND/OR EDIT ?

When data are directly tied to autonomous systems or robots that interact with humans, the threats posed by messy or hacked data are exacerbated, according to one participant. This participant said that, for example, automated vehicles, security systems, and weapons systems that depend on AI could all be easily sabotaged to cause harm. This participant further emphasized that as human decision-makers increasingly rely on AI to make decisions on their behalf, immediate data veracity and integrity becomes ever more important, especially in financial markets and in the legal system. In addition, we heard from the forum participants that private companies may be unwilling to share their data because they do not want to expose the details of their proprietary technologies or intellectual property. They are also concerned about hacking as more and more things come under control by AI.

According to one participant, it is not uncommon for large companies to buy smaller companies just to get access to their human capital.

EXAMPLE : JEFF BEZOS BOUGHT THE MAGAZINE I WAS A 10% OWNER OF
SINCE 2017 - DEFENDANT : R.J.I. 1:22-CV-06222-UA
- AND APPARENTLY HAS BEEN CLAIMING THAT BY OWNERSHIP OF THIS

supervision. This approach was used to train an algorithm to win 49 Atari videogames in 2015.

Machine-Learning Systems Are Credited with Recent Advances in AI

Advances in machine learning in recent years have resulted in systems that are now capable of outperforming humans at some specific tasks. In supervised machine learning, an algorithm is presented data to which labels (or answers) have been assigned. The algorithm then uses the labeled data to identify logical patterns that predict a specified answer to a problem. After a pattern is identified, it can be used to apply to similar problems. In unsupervised machine learning, no labels are given to the inputs, leaving the algorithm to identify structure in the inputs, for example, by clustering similar data. In other words, unsupervised learning is based on grouping like things without a preconceived idea of what to expect. In semisupervised learning, the machine-learning algorithm is provided some data that are labeled with answers and other data that are not labeled. The algorithm then uses the labeled data to determine the pattern and apply labels to the remaining data. Semisupervised learning can be useful in circumstances where there are too many data to be labeled.

Deep neural networks, a subset of machine-learning algorithms, have been trained to classify images, detect objects, identify people from faces, generate text from speech, translate natural languages, and many other tasks. There is some adaptability of deep neural networks for solving
